5. arabidopsis shoot

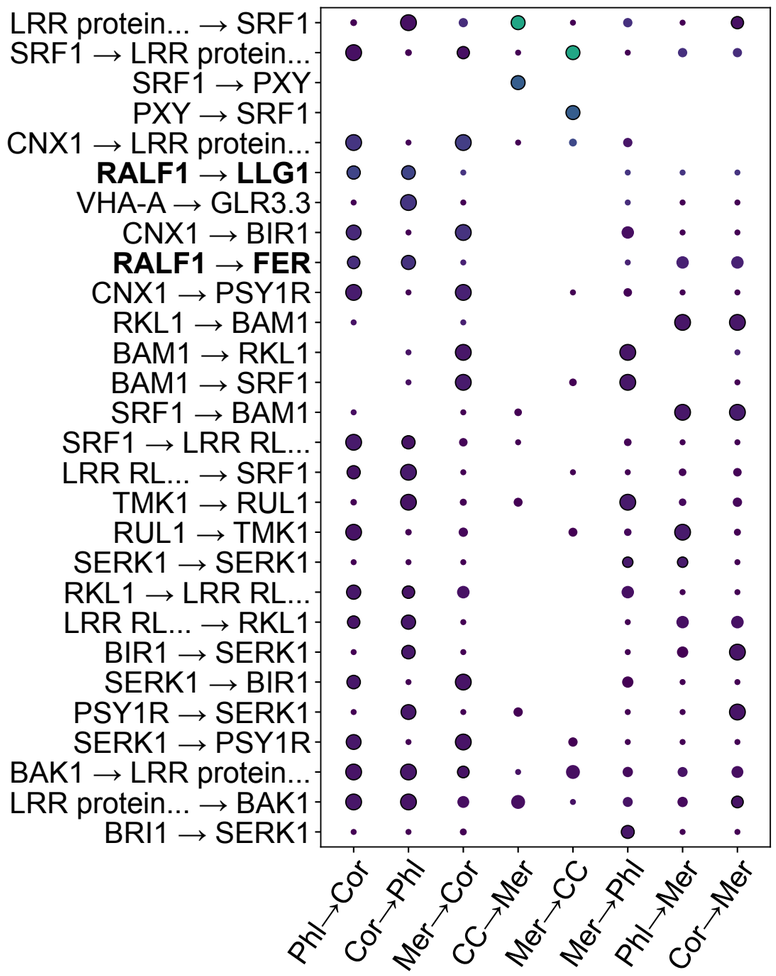

2. arabidopsis leaf

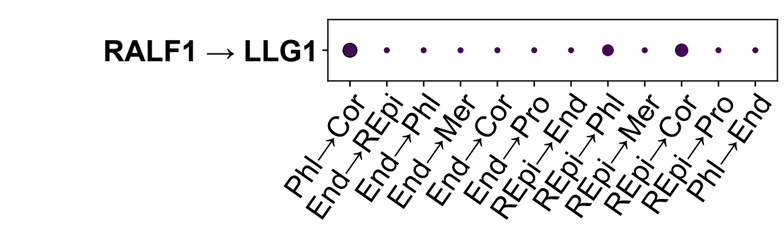

3. arabidopsis ovule

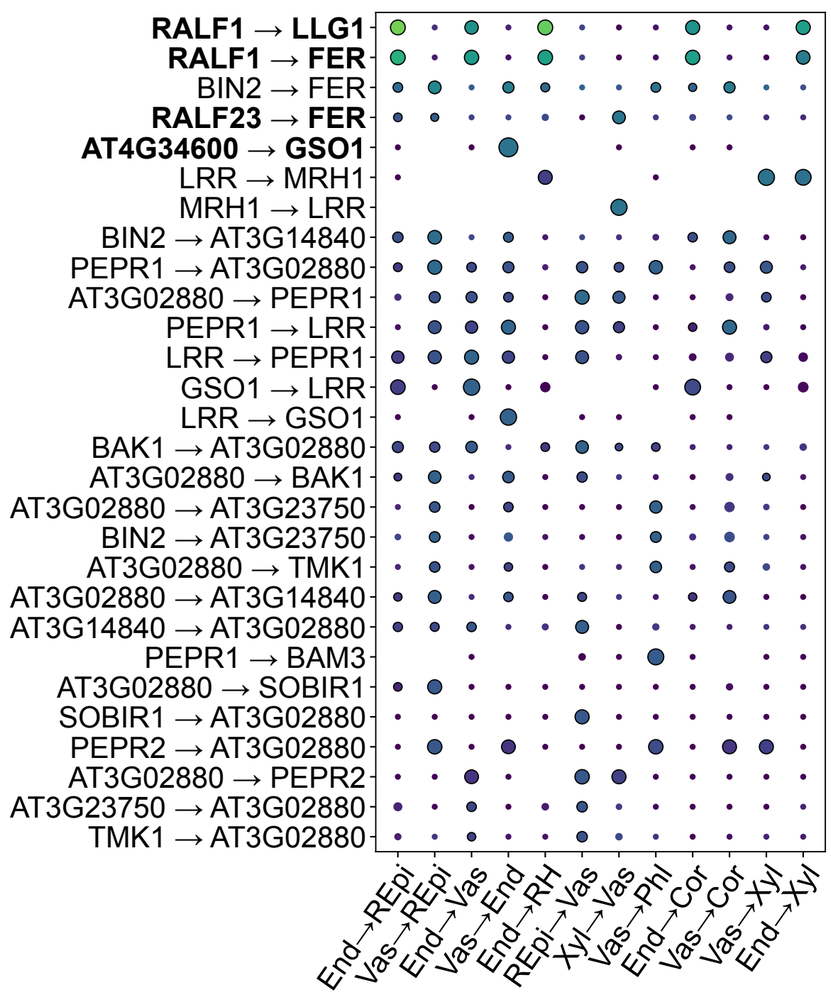

1. alfalfa root

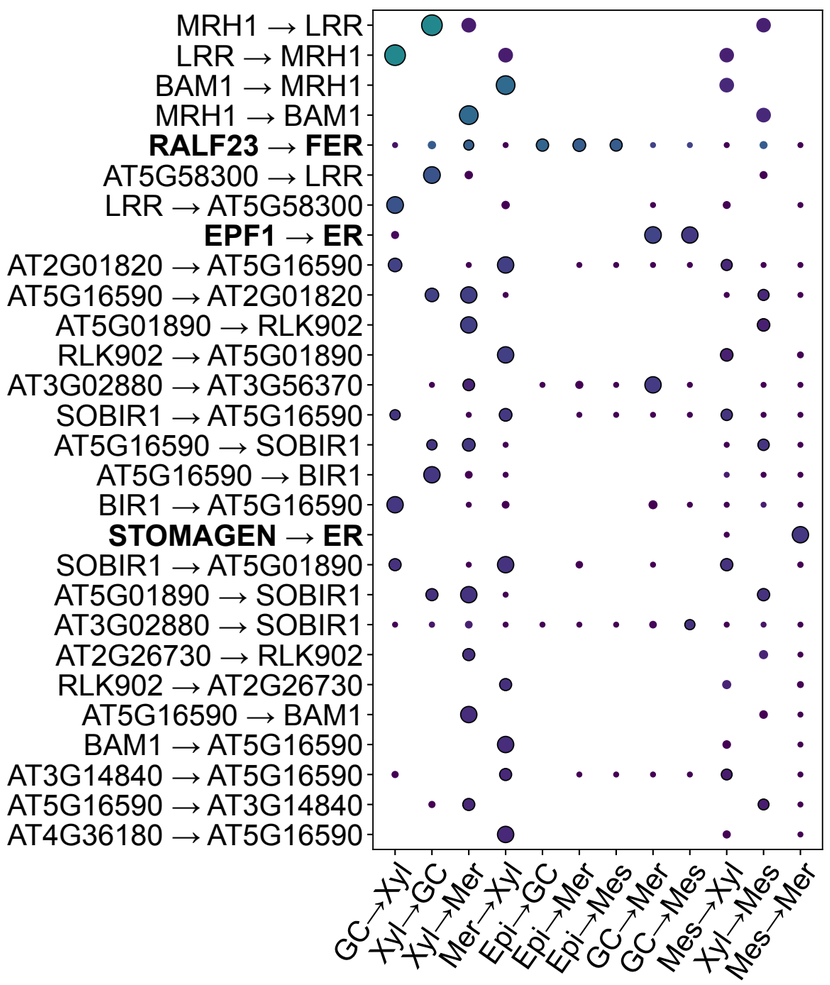

7. banana root

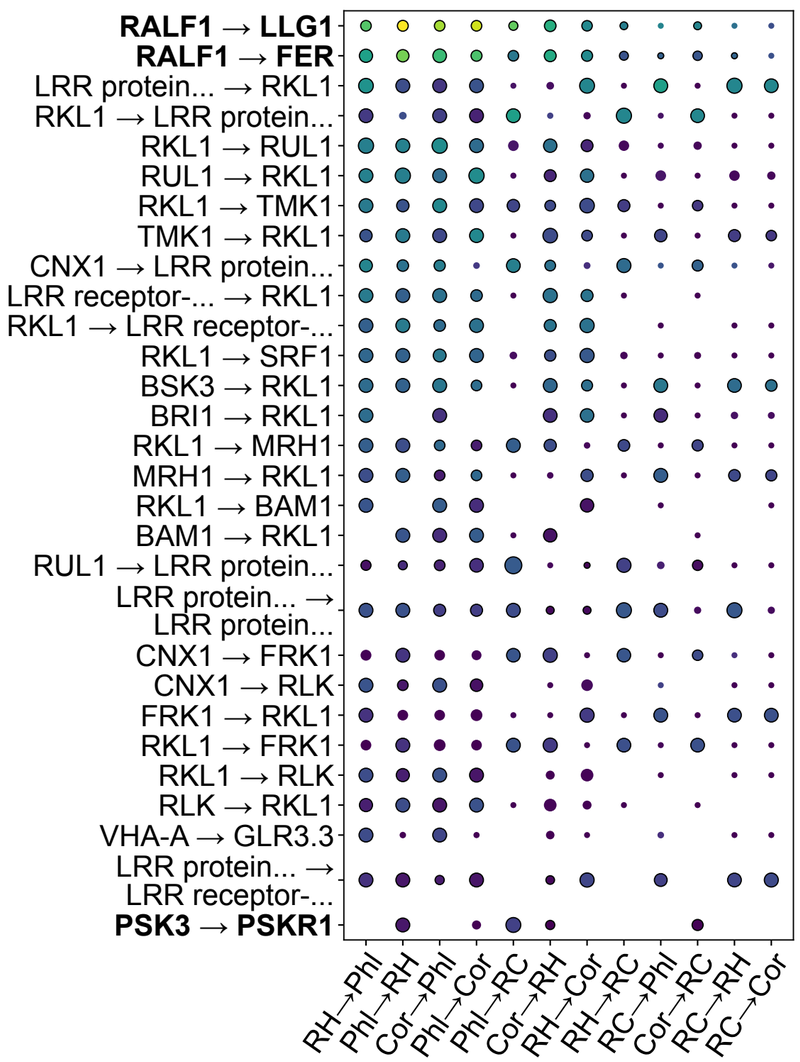

4. arabidopsis root

6. arabidopsis shoot apex

8. barley root

−log10 magnitude rank

Specificity rank
1e-1 1e-3 1e-5

Primary black: significant; exploratory black: dual
Grey: single method; hollow: unsupported
Bold: gold standard; †: organ-confounded

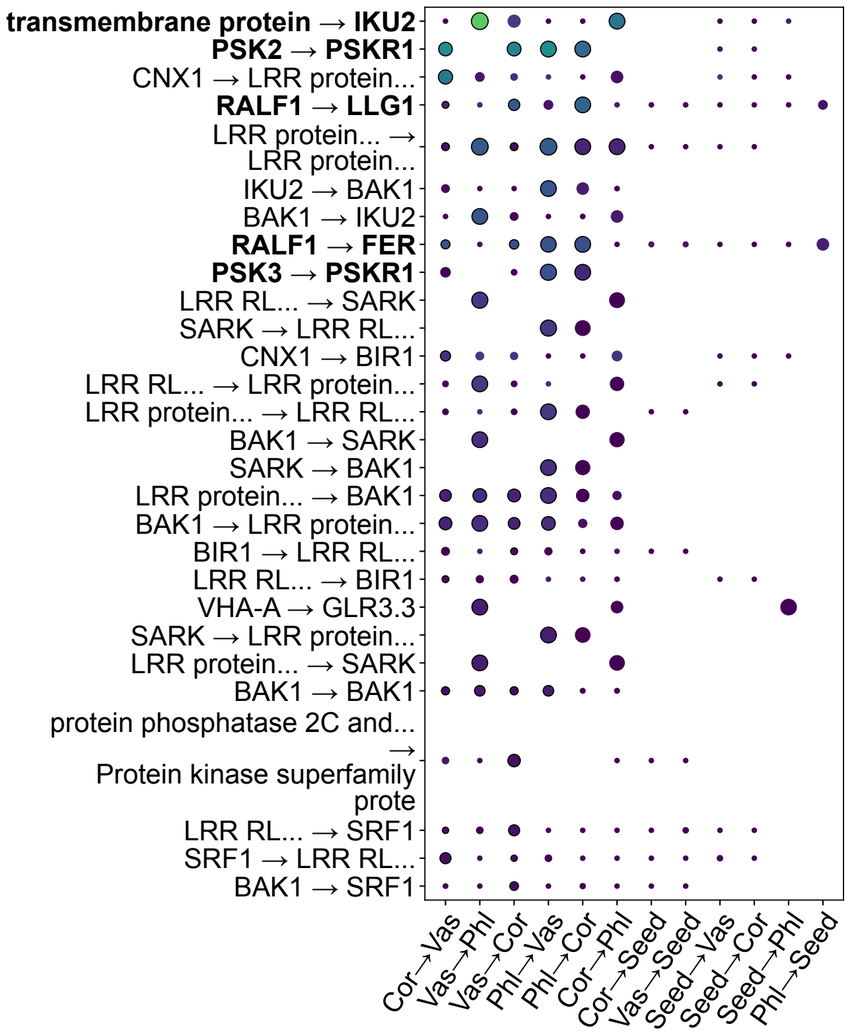

CC: companion cell
GC: guard cell
Pro: procambium
Vas: vascular

Cor: cortex
Mer: meristematic
RC: root cap
Xyl: xylem

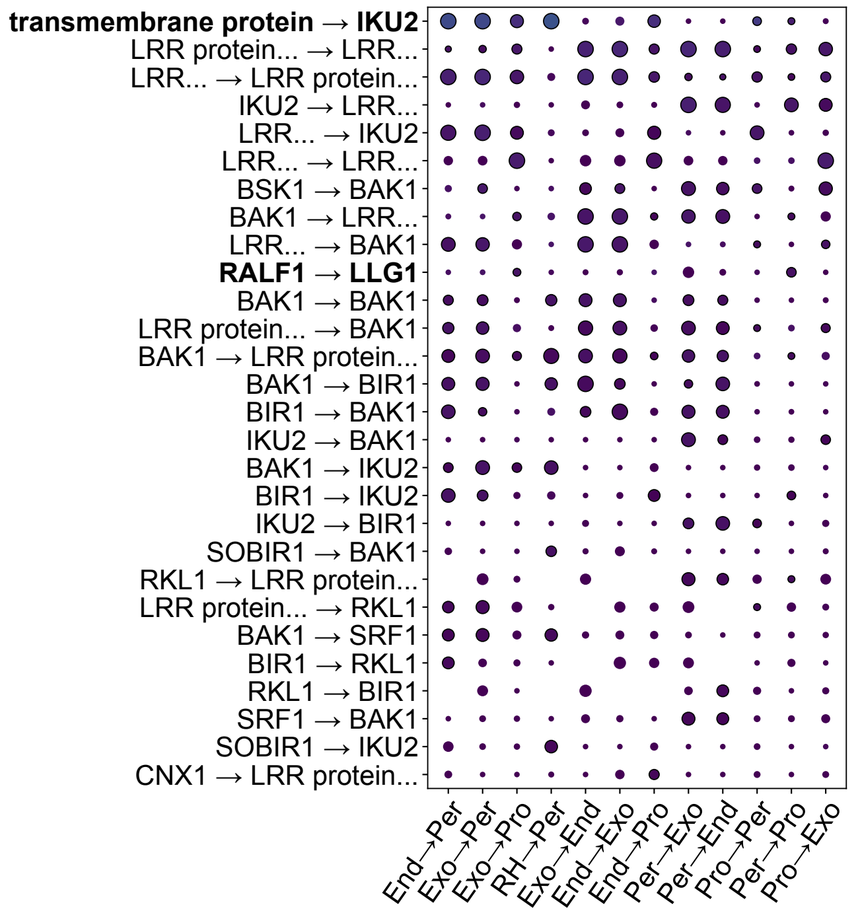

End: endodermis
Mes: mesophyll
REpi: root epidermis

Epi: epidermis
Phl: phloem
RH: root hair

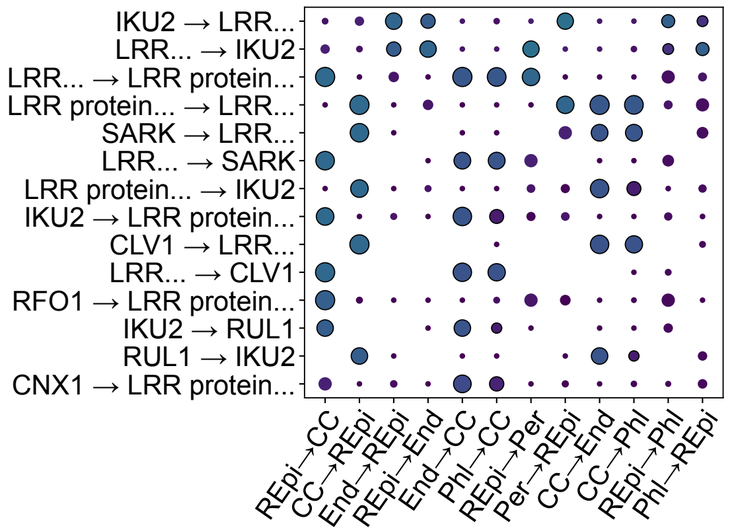

13. cotton embryo seed

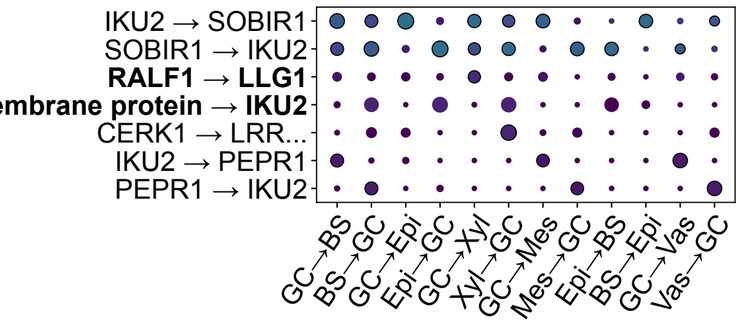

12. cassava root

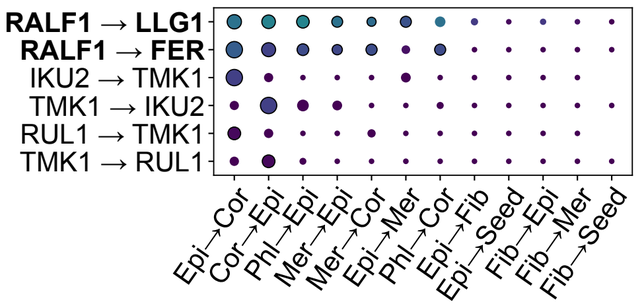

9. broccoli whole seedling

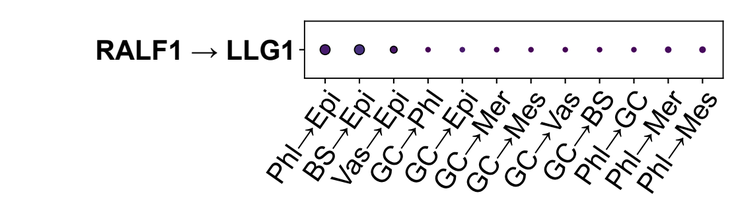

10. cabbage leaf

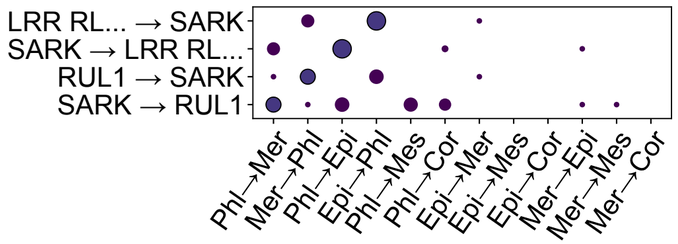

15. cotton ovule fibre

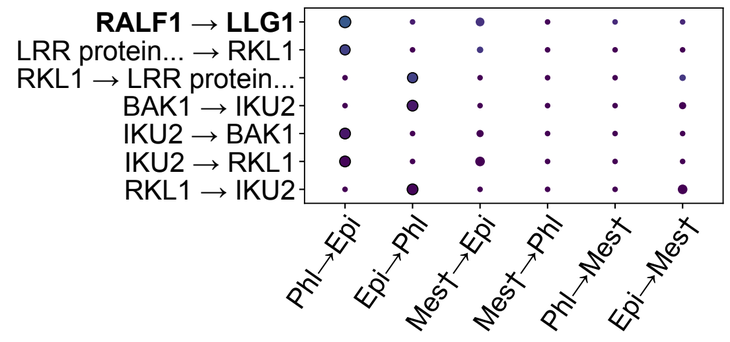

11. cabbage shoot

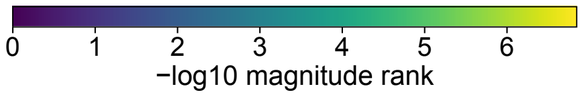

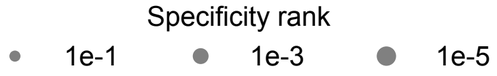

14. cotton leaf

16. grape leaf

Primary black: significant; exploratory black: dual
Grey: single method; hollow: unsupported
Bold: gold standard; †: organ-confounded

BS: bundle sheath
Epi: epidermis
Mer: meristematic
Pro: procambium
Vas: vascular

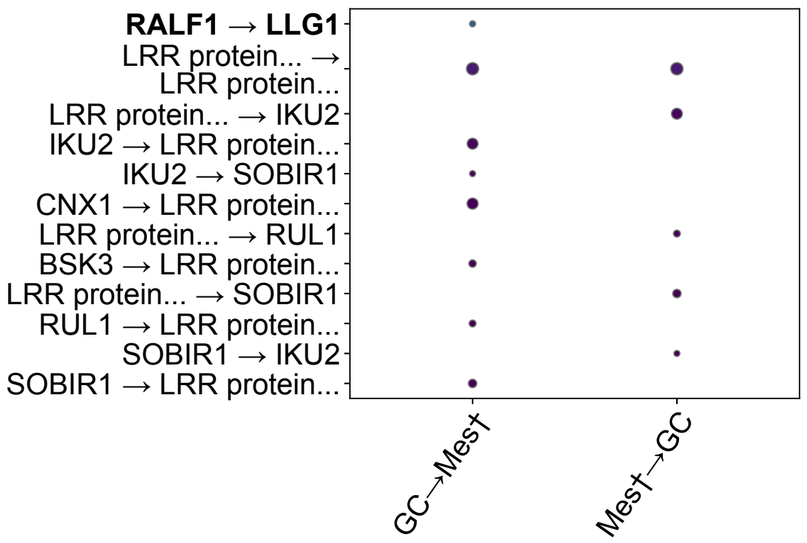

CC: companion cell
Exo: exodermis
Mes: mesophyll
REpi: root epidermis
Xyl: xylem

Cor: cortex
Fib: fiber
Per: pericycle
RH: root hair

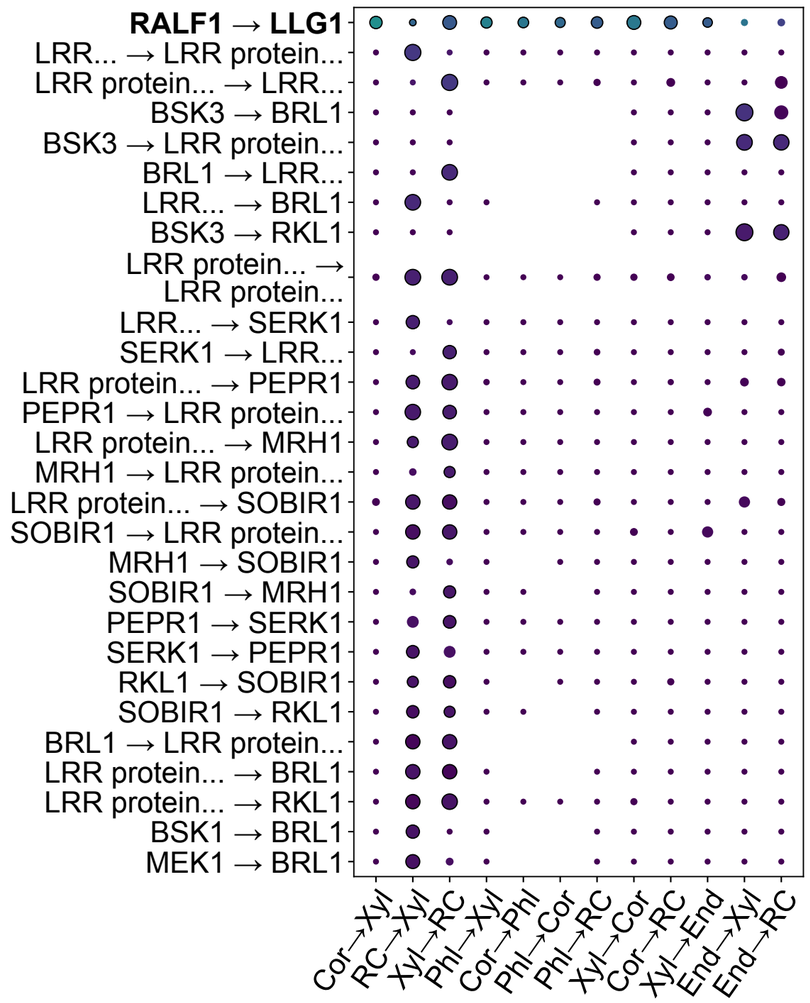

End: endodermis
GC: guard cell
Phl: phloem
Seed: seed coat

17. kiwifruit leaf

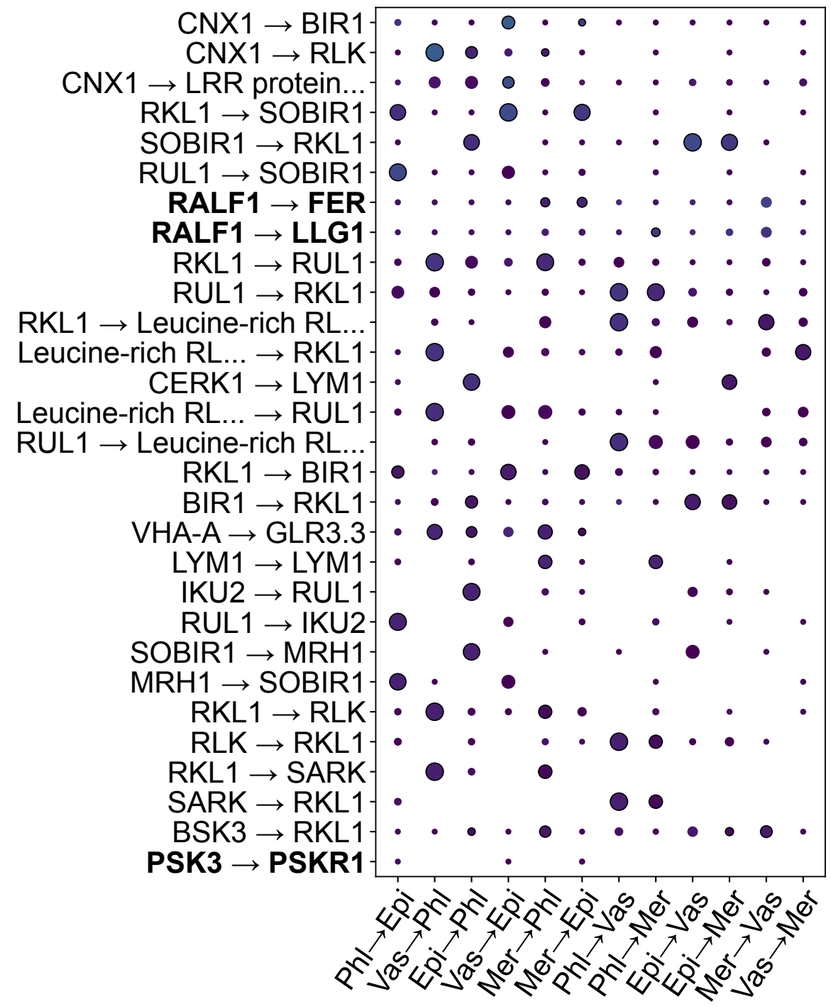

Exploratory: supported candidates; single library

18. maize root

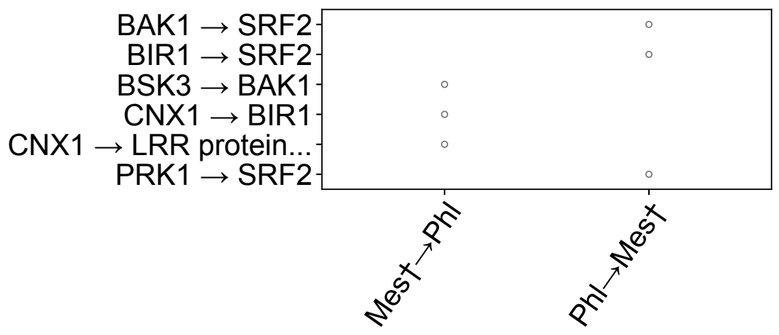

21. potato shoot

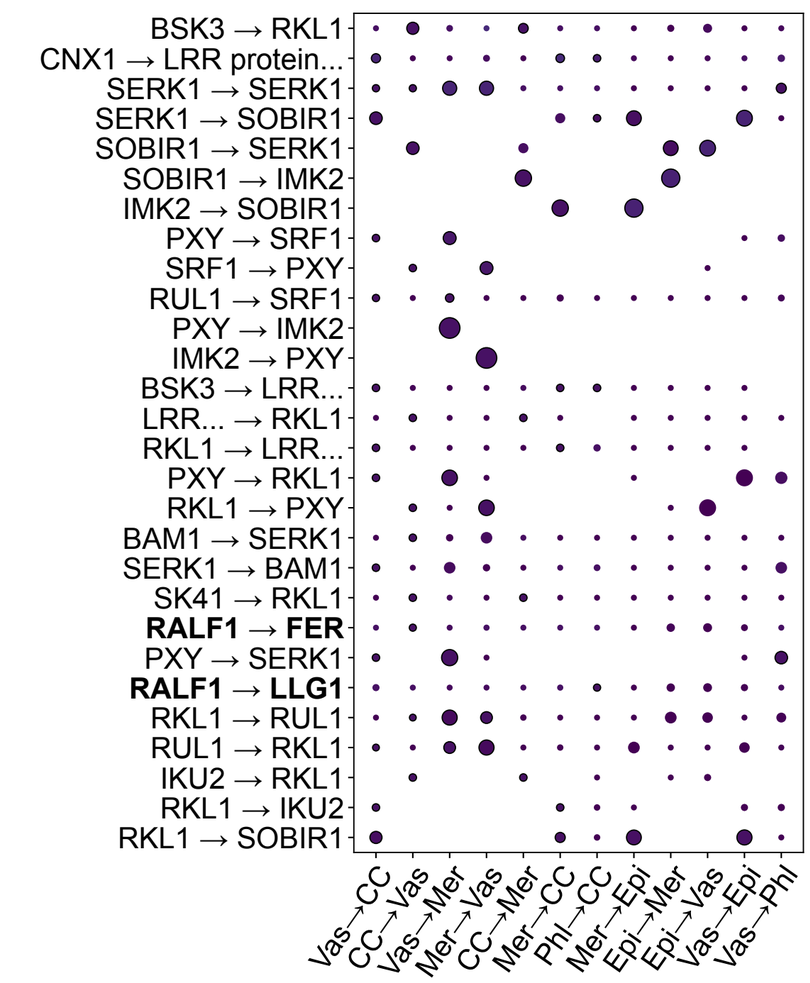

19. peanut leaf

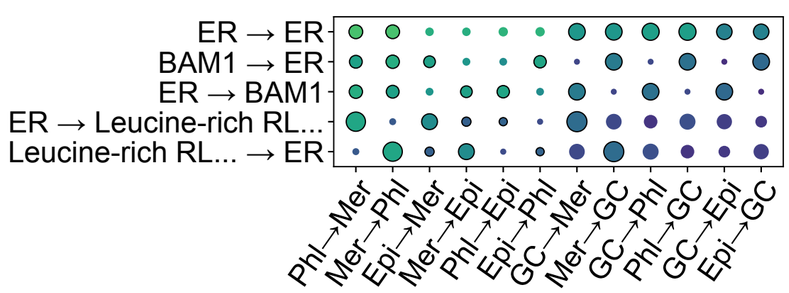

Exploratory: detected only; no statistical support

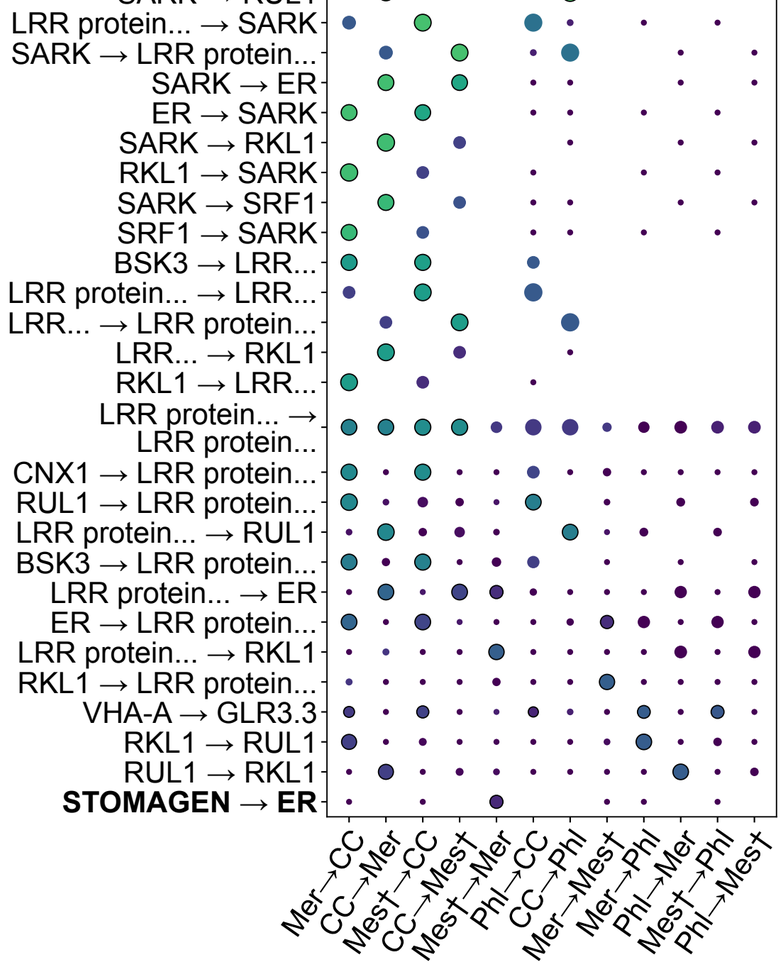

22. potato tuber stolon

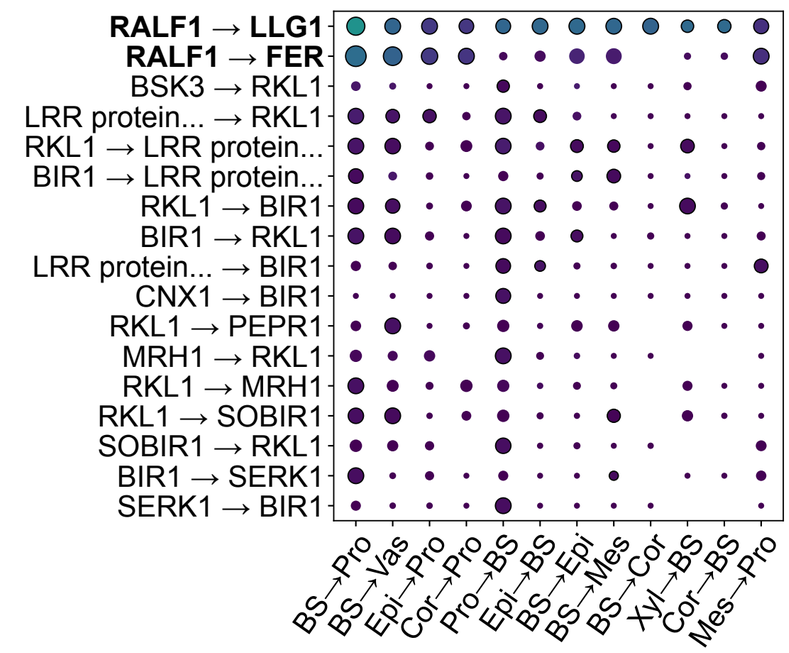

23. rape leaf

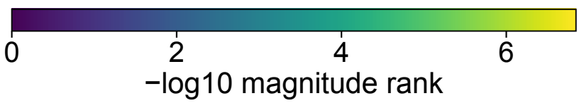

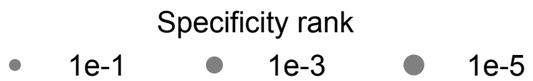

20. potato leaf

24. rice leaf

Primary black: significant; exploratory black: dual
Grey: single method; hollow: unsupported
Bold: gold standard; †: organ-confounded

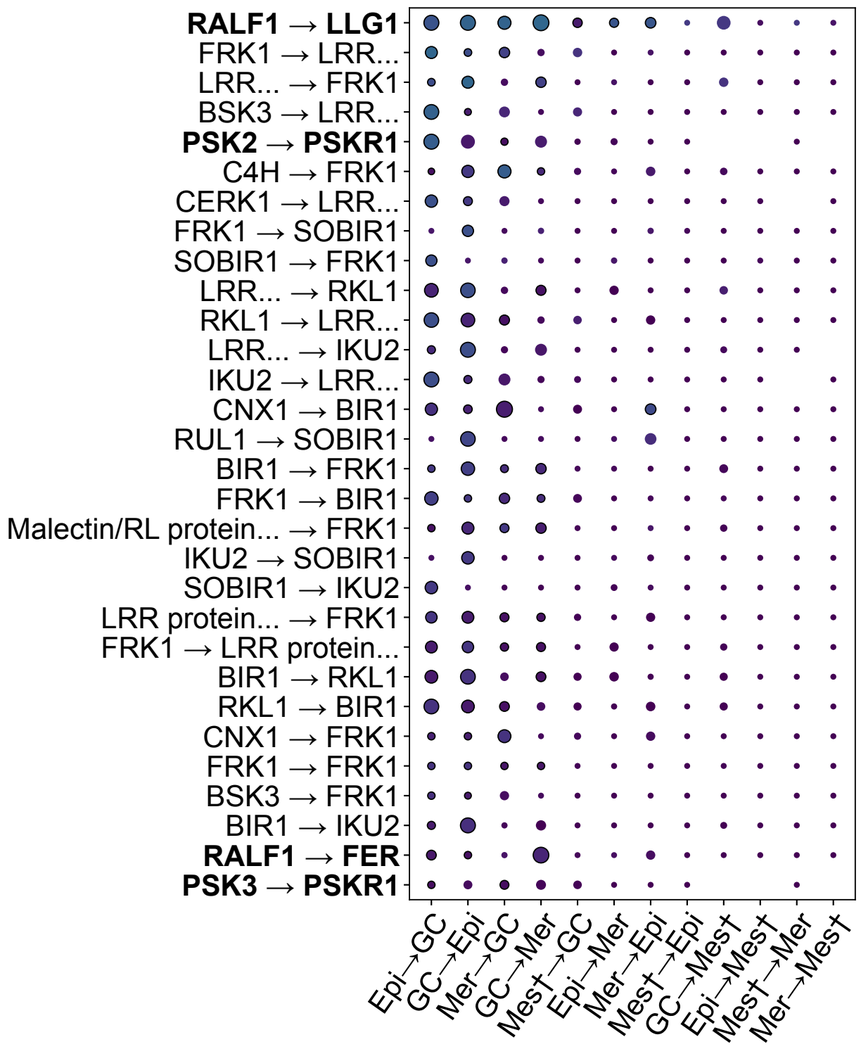

BS: bundle sheath
Epi: epidermis
Phl: phloem
Xyl: xylem

CC: companion cell
GC: guard cell
Pro: procambium

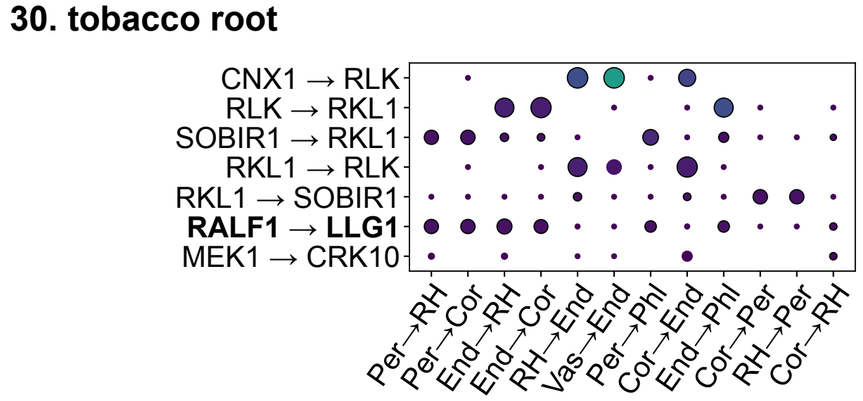

Cor: cortex
Mer: meristematic
RC: root cap

End: endodermis
Mes: mesophyll
Vas: vascular

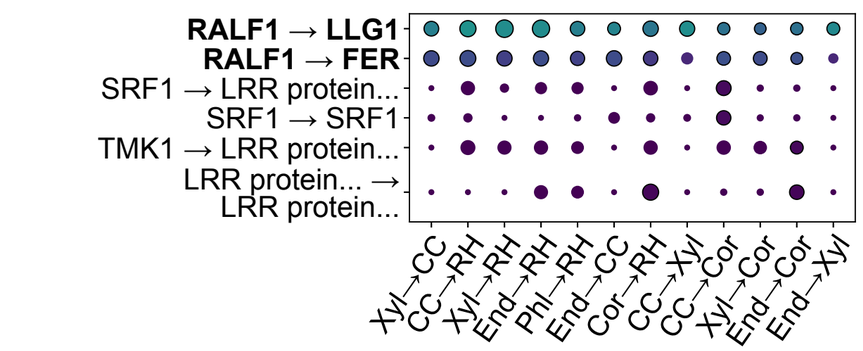

29. tea leaf

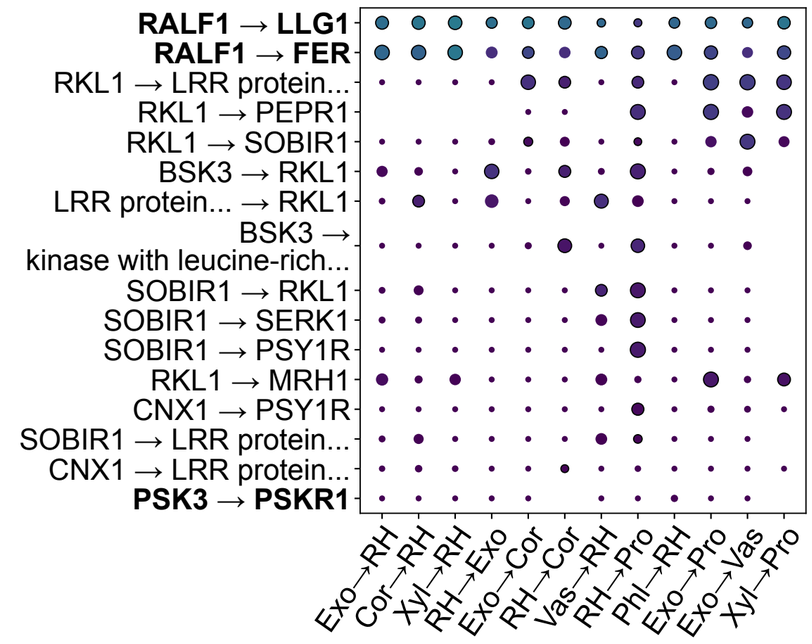

30. tobacco root

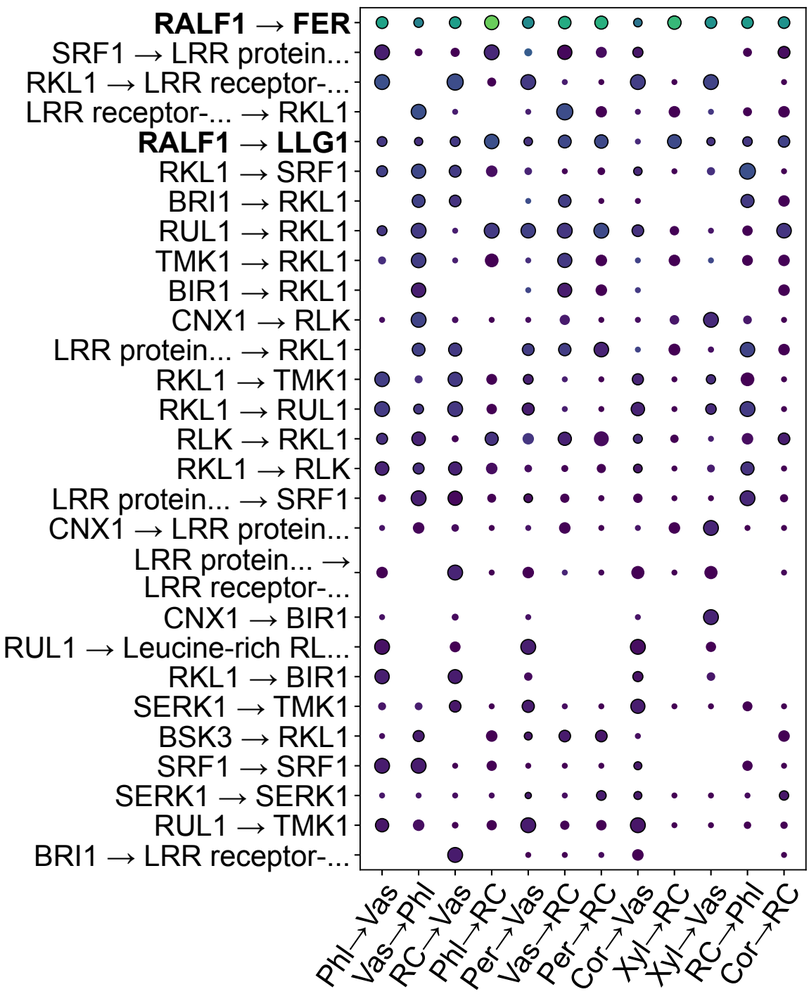

32. wheat root

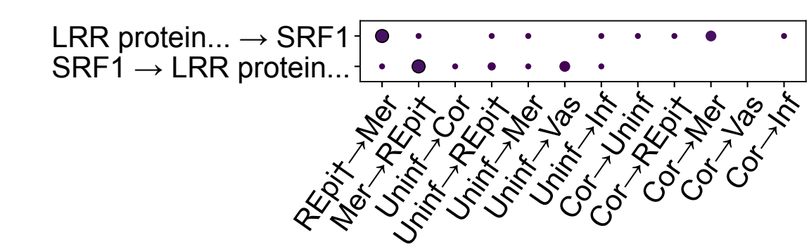

25. rice root

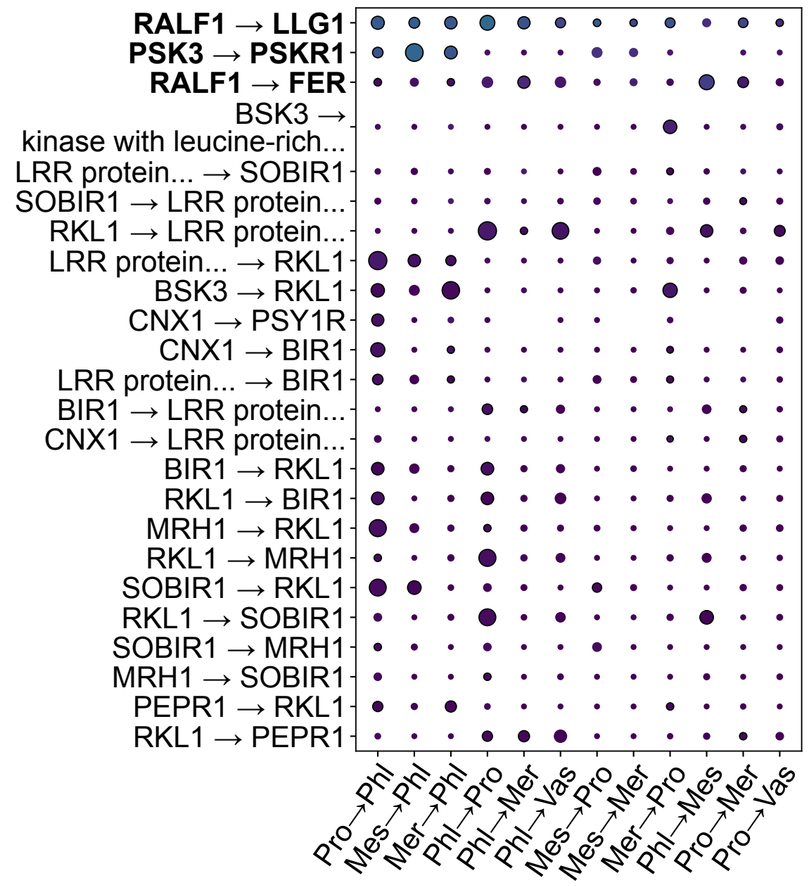

27. sorghum root

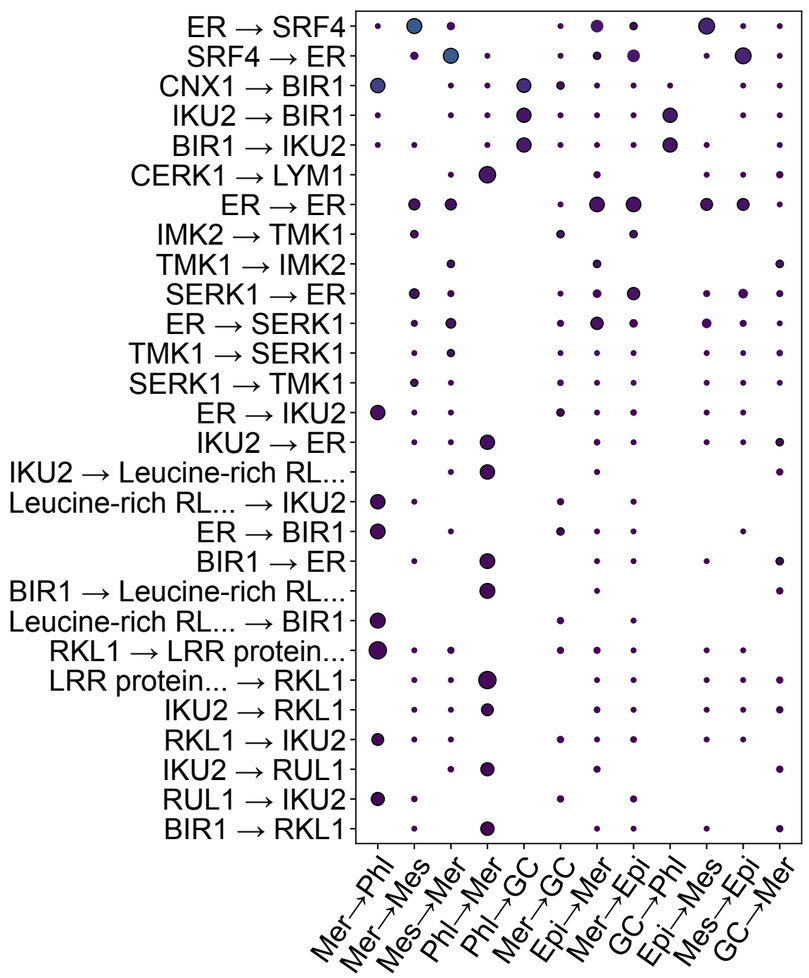

28. soybean nodule

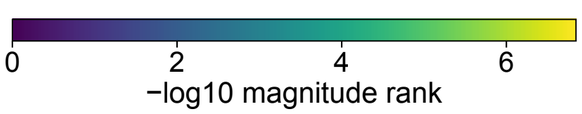

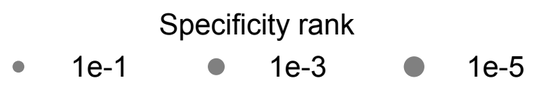

26. rice stem

31. tomato shoot apex

Primary black: significant; exploratory black: dual
Grey: single method; hollow: unsupported
